

Farah Faggaa

Full-Stack Software Engineer | QA & Test Automation Focus

Address: Rue ibn arafa kalaa seghira, Sousse, Tunisia
Phone: +216 50 453 537
Email: farrah.faggaa@gmail.com
LinkedIn: Farah.Faggaa

PERSONAL PROFILE

Rigorous and methodical software engineer specialized in Java/Angular development, currently preparing the ISTQB certification (Foundation Level). I master requirements analysis, technical design and validation. My responsiveness and analytical skills allow me to ensure quality across the full lifecycle of IT projects.

TECHNICAL SKILLS

Quality Assurance & Testing: Requirements analysis, design of test plans and scenarios, test execution and reporting, defect tracking and management.
Testing Tools: Postman (API testing and validation), Azure DevOps (User Stories and defect lifecycle management).
Languages & Frameworks: Java, Spring Boot, JavaScript, Angular, TypeScript, React, Node.js, PHP.
Databases: SQL, PostgreSQL, MongoDB, MySQL.
Tools & Methodologies: Software design (UML, Design Patterns), Agile methods (Scrum), Git/GitHub, Docker.
Software: Visual Studio, IntelliJ, Postman, Android Studio, Trello, Eclipse.
Operating Systems: Windows, Linux (Ubuntu).

PROFESSIONAL EXPERIENCE

Global Commerce Tunisie - Sahline **since 13/01/2026**
Full-Stack Developer & Technical Sales
Project: Design, full development and deployment of the showcase web platform and optimization of digital performance:

- Requirements study, UML modeling of the front-end architecture and writing of functional specifications to structure the application lifecycle.
- Creation of graphic mockups and integration of fluid, responsive, high-performance user interfaces (Mobile-First).
- Design and implementation of a technical Proof of Concept (POC) in React to validate the smoothness and feasibility of dynamic filtering before the global deployment phase.
- Development of reusable React components for managing and dynamically filtering the product catalog.
- Implementation of server-side business logic, data flow management and SMTP/API service integration to process customer requests.
- Application of development best practices (Clean Code) and use of Git/GitHub for rigorous version tracking.

Tech environment: React, JavaScript, HTML5, CSS3 (Tailwind CSS), PHP, APIs, Git/GitHub, UML.

Insy2s - France **29/01/2024 - 14/06/2024**
Final-year internship (engineering degree)
Project: Design and development of a generic workflow module “InsyProcess” with an integrated rules engine for process automation:

- Feasibility study, technical modeling of the “InsyProcess” workflow module and design of interface mockups.
- Development of Spring Boot microservices and microfrontends (Module Federation) for data integration.
- Implementation of access and authorization management with Keycloak.
- Creation of a monitoring dashboard and dynamic modeling interfaces (Drag & Drop) for process automation.

Tech environment: Spring Boot, Angular, PostgreSQL, Agile Scrum.

ISatisfy - Bois-Colombes **14/08/2023 - 15/09/2023**
Skills-development internship
Project: Design and development of a human resources management web application:

- Software architecture modeling with StarUML and design of HR management modules.
- Implementation of role and authorization management with Spring Security.
- Creation and optimization of REST API services for user and access management.
- Development of dynamic user interfaces for business processes (leave, profiles) with Angular.
- Active participation in Agile Scrum cycles (sprint planning and reviews).

Tech environment: Java (Spring Boot), Angular, PostgreSQL, StarUML, Git, Postman.

WIMOVA - Lyon **20/06/2022 - 19/09/2022**
Skills-development internship
Project: Back-end and front-end web development on an electronic assignment platform:

- Functional mapping and UML modeling for the architecture of the new “Client Area” module.
- Writing of functional and technical specifications detailing the system’s business processes.
- Creation of CRUD APIs (Node.js/Symfony) and development of dynamic Angular interfaces for client data management.
- Endpoint validation with Postman and deployment tracking in a Docker and Azure DevOps environment.

Tech environment: Angular, Node.js, Symfony, PostgreSQL, Docker, Azure DevOps.

IOT Medical Technology **10/01/2021 - 11/06/2021**
Final-year internship (Bachelor's degree)
Project: Design and development of a human resources management web application:

- Programming of Python scripts on Raspberry Pi for real-time acquisition and processing of medical data.
- Setup of communication via the MQTT protocol and visualization of metrics on Grafana.
- Sensor calibration and accuracy tests to guarantee the reliability of health measurements.

Tech environment: Python, Raspberry Pi, MQTT, Grafana, Cloud.

Vortex - Sousse **03/07/2020 - 05/08/2020**
Observation internship
Project: Design and development of a module in an e-commerce application:

- Study of how the modules work and of the architecture of an e-commerce platform (Prestashop).
- Creation of a test module and customization of interfaces through the back-office.
- Use of Git to track changes and back up the code.

Tech environment: PHP, MySQL, Prestashop, Git.

ACADEMIC EDUCATION

Polytechnic School of Sousse **09/2021 - 06/2024**
• National Engineering Degree in Computer Science Sousse, Tunisia

Higher Institute of Applied Sciences and Technology of Sousse (ISSAT Sousse) **09/2019 - 06/2021**
• Applied Bachelor's Degree in Industrial Computing Sousse, Tunisia

CERTIFICATIONS

ISTQB Certified Tester Foundation Level (CTFL v4.0): In preparation
DELF B2: Diploma in French Language Studies (valid for life).
Cisco Certified Academy – CCNAv7: Introduction to networks.

LANGUAGES

- **Arabic:** Native.
- **French:** Fluent (DELF B2).
- **English:** Technical proficiency.
- **German:** Basic.
